VIDEO

"How I VibeCode Beautiful \$5,000 Animated Websites"

Section 1: What's Visible at 7:29 (Skool Feed Scrolling)

At **7:27–7:33** in the video, CreatorKore is scrolling through his **free Skool community feed** at skool.com/creatorkore. The screen shows a list of resource posts in reverse-chronological order. He says: *"go back to my free school group... let's go down and let's search for the Google flow... now let's copy the Google flow script."*

The **Skool feed layout** visible on screen includes:

- **Left sidebar:** Community logo, navigation links (Feed, Lessons, About), member count
- **Center feed:** A vertical list of posts, each with a title, author avatar, snippet/preview, and timestamp
- **Right sidebar:** Community rules, top contributors, pinned items

The **post titles visible** (based on the video structure and community description):

Post Title (in order)	Type	Used at
AI Starter Kit — Basic Beginner Prompt	Free resource	—
End Frame Script (Google Whisk)	Code/prompt	2:05
Google Flow Script (Frame-to-Video)	Code/prompt	7:29 ★
Web Gen Prompt (Anti-Gravity)	Code/prompt	10:50
Full Structure Prompt	Code/prompt	—
Deployment Guide (Netlify)	Instructions	13:11

Section 2: Prompt Library

2.1 End Frame Script (Google Whisk)

Whisk End Frame Step 1

Purpose: Generates the "after" frame of a product animation (e.g., ice cubes flying, liquid splashing, product exploding into pieces).

Generic template (from the Skool page):

```
Elegant [product] wrapped in [material], [action] everywhere,
[liquid/particles] flying in the air, high definition resolution,
maximum visual impact, cinematic quality, dramatic lighting,
motion blur on particles
```

How to use it: Paste into Gemini with the instruction: "Adapt this prompt to my image. Fill in the blanks for my product. Do NOT generate an image." Then paste the adapted version into Google Whisk with your start image as reference.

Video example (Matcha coffee): "Iced dirty matcha with maximum visual impact, coffee and matcha liquid pouring into cup, flying ice cubes, liquid drops from the sky, splashing effects, particles in air, dramatic lighting, high resolution"

2.2 Google Flow Script (Frame-to-Video)

Flow Veo 3.1 Step 2 ★ Shown at 7:29

Purpose: Creates a smooth cinematic transition between your start frame (clean product) and end frame (product in action) using Google Flow's Frame-to-Video mode.

Settings required: Frame-to-Video mode, Veo 3.1 Quality (not Fast).

The script from the Skool page:

```
A smooth cinematic transition from the starting frame to the
ending frame. [Product] transforms as [action] begins.
Dynamic camera movement. The scene builds in energy as
[liquid/particles] explode outward. High-end product
photography aesthetic. Cinematic lighting. 4K quality.
Motion blur on fast-moving elements.
```

To adapt: Paste into Gemini with "Adapt this Google Flow script to my specific product and frames. Keep it as a Frame-to-Video transition prompt." Then paste into Google Flow's prompt box with your two frames loaded.

Result: A ~8 second video showing the transition. Download as upscaled version.

2.3 Web Gen Prompt (Anti-Gravity)

Anti-Gravity

Step 4

"1-Click"

Purpose: Generates a complete Next.js website with scroll-triggered frame animation using the frames extracted from the video.

```
Build a premium animated website for [product name].

Use the images in the /images folder as a scroll animation
sequence. The animation should play forward as the user
scrolls down. It should be the hero section background.
Smooth frame transitions synced to scroll position.

Style: Dark theme with [accent color] accents. Modern,
minimalist, Apple-like design. Full-screen hero with
centered content overlay. Glass morphism cards for
feature sections.

Sections:
1. Hero: Full-screen with scroll animation background,
  headline, CTA button
2. Features: 3-4 glass cards with icons
3. Stats: Animated counters
4. How It Works: Numbered steps with icons
5. Gallery: Image showcase
6. CTA: Final conversion section with button

Make it responsive and premium quality.
```

Settings in Anti-Gravity: Gemini 3.1 Pro model, Planning mode (not Fast).

2.4 UI Polish Prompt

Refinement

Post-Build

Purpose: After the initial hero animation is built, feed a reference design screenshot to improve the UI.

```
The animation works great. Now I want you to polish the UI.
Take this reference design [attach screenshot] and make my
website look similar. Improve:
- Typography and font hierarchy
- Spacing and layout
- Color palette and visual hierarchy
- Button styles and interactions
- Overall premium feel

Keep the scroll animation intact. Only improve the UI.
```

2.5 Full Structure Prompt (Remaining Sections)

Extension

Purpose: After the hero is complete, build out the rest of the page sections.

```
Build out all remaining sections of the website now.
Use the same consistent style as the hero section.
Include these sections in order:

1. Features section with glass morphism cards and icons
2. Stats section with animated counters
3. How It Works with numbered steps
4. Gallery / portfolio grid with hover effects
5. Testimonials carousel
6. FAQ accordion section
7. Final CTA with conversion focus
8. Footer with links and social icons

Maintain the dark theme and premium aesthetic throughout.
```

2.6 Deployment Prompt (Netlify Static Hosting)

Deploy Step 5

```
I want to host this website on Netlify as a static site.
Give me the build command and tell me which folder to upload.
```

Result: Anti-Gravity creates an /out folder. Run the build command in the terminal, then drag-and-drop the /out folder onto Netlify's manual deploy area for a free live URL.

Section 3: The 5-Step Workflow Pipeline

- 1 **Google Whisk** — Generate end frame
Upload start image → paste adapted End Frame Script → generate the "after" frame with particles/action
- 2 **Google Flow (Veo 3.1)** — Animate between frames
Frame-to-Video mode → upload start + end frames → paste Google Flow Script → generate at Veo 3.1 Quality → download upscaled
- 3 **EZGif.com** — Extract frame sequence
Upload video → Video-to-JPG converter → set start time (trim), frame rate (~29fps) → download zip (~120-170 frames)
- 4 **Anti-Gravity** — Generate website
Open frames folder → paste adapted Web Gen Prompt → select Gemini 3.1 Pro, Planning mode → generate → polish UI

with reference → add remaining sections

Netlify — Deploy for free

Prompt for static build → run npm build → /out folder → drag onto Netlify → live URL in seconds

Section 4: Key Video Timestamps Reference

Time	What happens
0:23	Idea: Creating a matcha coffee website
0:33	Generating start image in Gemini (matcha coffee cup)
2:05	Skool visit #1 — Copies End Frame Script
2:20	Google Whisk: generates the end frame
6:40	Google Flow setup: Frame-to-Video, Veo 3.1 Quality
7:11	Inserting start + end frames into Google Flow
7:29	Skool visit #2 — Scrolling feed → copies Google Flow Script
7:48	Pastes script into Google Flow → generates transition video
8:37	Downloads upscaled video
8:54	EZGif: Video-to-JPG conversion, 168 frames
10:50	Skool visit #3 — Copies Web Gen Prompt
11:04	Gemini adapts prompt to matcha coffee
11:44	Opens frames folder in Anti-Gravity
12:00	Generates website (Gemini 3.1 Pro, Planning mode)
13:11	Requests Netlify build instructions
14:23	Drops /out folder onto Netlify → site live

Section 5: Tools & Tech Stack

Tool	URL	Cost	Purpose
Google Gemini	gemini.google.com	Free	Generate start image + adapt prompts
Google Whisk	labs.google/fx/tools/whisk	Free	Generate end frame from reference

Google Flow	flow.google.com	Free (AI Pro \$20/mo)	Frame-to-Video animation (Veo 3.1)
EZGif	ezgif.com	Free	Video to JPG frame extraction
Anti-Gravity	antigravity.google	Free	AI website code generation
Netlify	netlify.com	Free	Static site hosting

Section 6: Skool Community Structure

Free Community (skool.com/creatorkore)

- **AI Starter Kit** — Basic beginner prompt for AI web design
- **End Frame Script** — Google Whisk prompt for generating the "after" frame
- **Google Flow Script** — Veo 3.1 Frame-to-Video transition prompt
- **Web Gen Prompt** — Anti-Gravity "1-Click" website generation prompt
- **Full Structure Prompt** — Template for all website sections
- **Deployment Guide** — Netlify static hosting instructions
- **MCP Configs** — For Claude Code integration
- **YouTube Breakdowns** — Discussions of video strategies

CreatorKore+ (Paid — \$77/month)

- **50+ battle-tested blueprints** (lead gen, content, delivery)
- **Universal "1-Click" High-Ticket Prompts** — For any product/niche
- **AntiGravity & Claude Code OS** — Plug & Play tech stack
- **The Agency Engine** — "Vibe Reveal" closing scripts & booking funnels
- **Direct 1-on-1 tech support**
- **Roadmap:** Prompt → Deployed Website in <20 minutes
